Message: Thank you for your tremendous work to make Arizona's economy one of the strongest in the country and for recognizing out of state occupational licenses welcoming workers. But those efforts are being undermined by the Industrial Commission that have put forth a proposal to drive doctor's out of the state and interfere with an injured worker's access to care. We call upon you to follow through on your state of the state promises to stand up to the licensing boards and other government bureaucrats who act as "bullies" and who are only looking out for their "cronies". There could not be a more clear-cut case of that happening at the Industrial Commission. So when the state hangs out the "Arizona is Open for Business" we aren't condemning those workers who are unfortunate enough to be injured to be left with substandard care. PLEASE TELL YOUR AGENCY TO WITHDRAWL THEIR OVER REACHING AND PUNITIVE PORPOSED POLICY!

Message: I oppose the proposed fee schedule language that limits access to care and makes it more difficult to receive the necessary medication for recovery from a work place accident. I ask that you remove ALL language that limits and/or prevents a doctor or a hospital's ability to dispense medication. The Industrial Commission should have the injured worker's best interest in mind and support the care necessary to promote recovery. These overreaching changes do nothing but make access to care and access to critical medication more difficult, and for those with low and limited income it makes it nearly impossible. This dramatic policy shift will only make receiving care more difficult. Thus drawing out the length of recovery of injured workers who want to get back to work. Please recognize that this staff driven proposal will drive doctor's out of the state, kill small businesses and most importantly do absolutely nothing to help injured workers get back to work. I ask that you remove ALL of the overreaching and ill-informed policy on physician dispensing from your proposed fee schedule. Thank you!

Message: I oppose the proposed fee schedule language that limits access to care and makes it more difficult to receive the necessary medication for recovery from a work place accident. I ask that you remove ALL language that limits and/or prevents a doctor or a hospital's ability to dispense medication. The Industrial Commission should have the injured worker's best interest in mind and support the care necessary to promote recovery. These overreaching changes do nothing but make access to care and access to critical medication more difficult, and for those with low and limited income it makes it nearly impossible. This dramatic policy shift will only make receiving care more difficult. Thus drawing out the length of recovery of injured workers who want to get back to work. Please recognize that this staff driven proposal will drive doctor's out of the state, kill small businesses and most importantly do absolutely nothing to help injured workers get back to work. I ask that you remove ALL of the overreaching and ill-informed policy on physician dispensing from your proposed fee schedule. Thank you!

Message: Thank you for your tremendous work to make Arizona's economy one of the strongest in the country and for recognizing out of state occupational licenses welcoming workers. But those efforts are being undermined by the Industrial Commission that have put forth a proposal to drive doctor's out of the state and interfere with an injured worker's access to care. We call upon you to follow through on your state of the state promises to stand up to the licensing boards and other government bureaucrats who act as "bullies" and who are only looking out for their "cronies". There could not be a more clear-cut case of that happening at the Industrial Commission. So when the state hangs out the "Arizona is Open for Business" we aren't condemning those workers who are unfortunate enough to be injured to be left with substandard care. PLEASE TELL YOUR AGENCY TO WITHDRAW THEIR OVER REACHING AND PUNITIVE PROPOSED POLICY!

Please recognize that this staff driven proposal will drive doctor's out of the state, kill small businesses and most importantly do absolutely nothing to help injured workers get back to work. I ask that you remove ALL of the overreaching and ill-informed policy on physician dispensing from your proposed fee schedule. Thank you!

Message: Thank you for your tremendous work to make Arizona's economy one of the strongest in the country and for recognizing out of state occupational licenses welcoming workers. But those efforts are being undermined by the Industrial Commission that have put forth a proposal to drive doctor's out of the state and interfere with an injured worker's access to care. We call upon you to follow through on your state of the state promises to stand up to the licensing boards and other government bureaucrats who act as "bullies" and who are only looking out for their "cronies". There could not be a more clear-cut case of that happening at the Industrial Commission. So when the state hangs out the "Arizona is Open for Business" we aren't condemning those workers who are unfortunate enough to be injured to be left with substandard care. PLEASE TELL YOUR AGENCY TO WITHDRAW THEIR OVER REACHING AND PUNITIVE PROPOSED POLICY!

Message: I oppose the proposed fee schedule language that limits access to care and makes it more difficult to receive the necessary medication for recovery from a work place accident. I ask that you remove ALL language that limits and/or prevents a doctor or a hospital's ability to dispense medication. The Industrial Commission should have the injured worker's best interest in mind and support the care necessary to promote recovery. These overreaching changes do nothing but make access to care and access to critical medication more difficult, and for those with low and limited income it makes it nearly impossible. This dramatic policy shift will only make receiving care more difficult. Thus drawing out the length of recovery of injured workers who want to get back to work. Please recognize that this staff driven proposal will drive doctor's out of the state, kill small businesses and most importantly do absolutely nothing to help injured workers get back to work. I ask that you remove ALL of the overreaching and ill-informed policy on physician dispensing from your proposed fee schedule. Thank you!

Message: Thank you for your tremendous work to make Arizona's economy one of the strongest in the country and for recognizing out of state occupational licenses welcoming workers. But those efforts are being undermined by the Industrial Commission that have put forth a proposal to drive doctor's out of the state and interfere with an injured worker's access to care. We call upon you to follow through on your state of the state promises to stand up to the licensing boards and other government bureaucrats who act as "bullies" and who are only looking out for their "cronies". There could not be a more clear-cut case of that happening at the Industrial Commission. So when the state hangs out the "Arizona is Open for Business" we aren't condemning those workers who are unfortunate enough to be injured to be left with substandard care. PLEASE TELL YOUR AGENCY TO WITHDRAW THEIR OVER REACHING AND PUNITIVE PROPOSED POLICY!

Message: I oppose the proposed fee schedule language that limits access to care and makes it more difficult to receive the necessary medication for recovery from a work place accident. I ask that you remove ALL language that limits and/or prevents a doctor or a hospital's ability to dispense medication. The Industrial Commission should have the injured worker's best interest in mind and support the care necessary to promote recovery. These overreaching changes do nothing but make access to care and access to critical medication more difficult, and for those with low and limited income it makes it nearly impossible. This dramatic policy shift will only make receiving care more difficult. Thus drawing out the length of recovery of injured workers who want to get back to work. Please recognize that this staff driven proposal will drive doctor's out of the state, kill small businesses and most importantly do absolutely nothing to help injured workers get back to work. I ask that you remove ALL of the overreaching and ill-informed policy on physician dispensing from your proposed fee schedule. Thank you!

Message: Thank you for your tremendous work to make Arizona's economy one of the strongest in the country and for recognizing out of state occupational licenses welcoming workers. But those efforts are being undermined by the Industrial Commission that have put forth a proposal to drive doctor's out of the state and interfere with an injured worker's access to care. We call upon you to follow through on your state of the state promises to stand up to the licensing boards and other government bureaucrats who act as "bullies" and who are only looking out for their "cronies". There could not be a more clear-cut case of that happening at the Industrial Commission. So when the state hangs out the "Arizona is Open for Business" we aren't condemning those workers who are unfortunate enough to be injured to be left with substandard care. PLEASE TELL YOUR AGENCY TO WITHDRAW THEIR OVER REACHING AND PUNITIVE PROPOSED POLICY!

Message: I oppose the proposed fee schedule language that limits access to care and makes it more difficult to receive the necessary medication for recovery from a work place accident. I ask that you remove ALL language that limits and/or prevents a doctor or a hospital's ability to dispense medication. The Industrial Commission should have the injured worker's best interest in mind and support the care necessary to promote recovery. These overreaching changes do nothing but make access to care and access to critical medication more difficult, and for those with low and limited income it makes it nearly impossible. This dramatic policy shift will only make receiving care more difficult. Thus drawing out the length of recovery of injured workers who want to get back to work. Please recognize that this staff driven proposal will drive doctor's out of the state, kill small businesses and most importantly do absolutely nothing to help injured workers get back to work. I ask that you remove ALL of the overreaching and ill-informed policy on physician dispensing from your proposed fee schedule. Thank you!

I ask that you remove ALL language that limits and/or prevents a doctor or a hospital's ability to dispense medication. The Industrial Commission should have the injured worker's best interest in mind and support the care necessary to promote recovery. These overreaching changes do nothing but make access to care and access to critical medication more difficult, and for those with low and limited income it makes it nearly impossible. This dramatic policy shift will only make receiving care more difficult. Thus drawing out the length of recovery of injured workers who want to get back to work. Please recognize that this staff driven proposal will drive doctor's out of the state, kill small businesses and most importantly do absolutely nothing to help injured workers get back to work. I ask that you remove ALL of the overreaching and ill-informed policy on physician dispensing from your proposed fee schedule. Thank you!

Message: Thank you for your tremendous work to make Arizona's economy one of the strongest in the country and for recognizing out of state occupational licenses welcoming workers. But those efforts are being undermined by the Industrial Commission that have put forth a proposal to drive doctor's out of the state and interfere with an injured worker's access to care. We call upon you to follow through on your state of the state promises to stand up to the licensing boards and other government bureaucrats who act as "bullies" and who are only looking out for their "cronies". There could not be a more clear-cut case of that happening at the Industrial Commission. So when the state hangs out the "Arizona is Open for Business" we aren't condemning those workers who are unfortunate enough to be injured to be left with substandard care. PLEASE TELL YOUR AGENCY TO WITHDRAW THEIR OVER REACHING AND PUNITIVE PROPOSED POLICY!

Message: I oppose the proposed fee schedule language that limits access to care and makes it more difficult to receive the necessary medication for recovery from a work place accident. I ask that you remove ALL language that limits and/or prevents a doctor or a hospital's ability to dispense medication. The Industrial Commission should have the injured worker's best interest in mind and support the care necessary to promote recovery. These overreaching changes do nothing but make access to care and access to critical medication more difficult, and for those with low and limited income it makes it nearly impossible. This dramatic policy shift will only make receiving care more difficult. Thus drawing out the length of recovery of injured workers who want to get back to work. Please recognize that this staff driven proposal will drive doctor's out of the state, kill small businesses and most importantly do absolutely nothing to help injured workers get back to work. I ask that you remove ALL of the overreaching and ill-informed policy on physician dispensing from your proposed fee schedule. Thank you!

Message: Thank you for your tremendous work to make Arizona's economy one of the strongest in the country and for recognizing out of state occupational licenses welcoming workers. But those efforts are being undermined by the Industrial Commission that have put forth a proposal to drive doctor's out of the state and interfere with an injured worker's access to care. We call upon you to follow through on your state of the state promises to stand up to the licensing boards and other government bureaucrats who act as "bullies" and who are only looking out for their "cronies". There could not be a more clear-cut case of that happening at the Industrial Commission. So when the state hangs out the "Arizona is Open for Business" we aren't condemning those workers who are unfortunate enough to be injured to be left with substandard care. PLEASE TELL YOUR AGENCY TO WITHDRAW THEIR OVER REACHING AND PUNITIVE PROPOSED POLICY!

Message: I oppose the proposed fee schedule language that limits access to care and makes it more difficult to receive the necessary medication for recovery from a work place accident. I ask that you remove ALL language that limits and/or prevents a doctor or a hospital's ability to dispense medication. The Industrial Commission should have the injured worker's best interest in mind and support the care necessary to promote recovery. These overreaching changes do nothing but make access to care and access to critical medication more difficult, and for those with low and limited income it makes it nearly impossible. This dramatic policy shift will only make receiving care more difficult. Thus drawing out the length of recovery of injured workers who want to get back to work. Please recognize that this staff driven proposal will drive doctor's out of the state, kill small businesses and most importantly do absolutely nothing to help injured workers get back to work. I ask that you remove ALL of the overreaching and ill-informed policy on physician dispensing from your proposed fee schedule. Thank you!

Message: Thank you for your tremendous work to make Arizona's economy one of the strongest in the country and for recognizing out of state occupational licenses welcoming workers. But those efforts are being undermined by the Industrial Commission that have put forth a proposal to drive doctor's out of the state and interfere with an injured worker's access to care. We call upon you to follow through on your state of the state promises to stand up to the licensing boards and other government bureaucrats who act as "bullies" and who are only looking out for their "cronies". There could not be a more clear-cut case of that happening at the Industrial Commission. So when the state hangs out the "Arizona is Open for Business" we aren't condemning those workers who are unfortunate enough to be injured to be left with substandard care. PLEASE TELL YOUR AGENCY TO WITHDRAW THEIR OVER REACHING AND PUNITIVE PROPOSED POLICY!
